

PRODUCT INFORMATION

PROSEP
FILTER SYSTEMS

HM-PRO

Our HM Pro water filter systems are supplied as a complete ready to fit kit providing fine filtration of your drinking water.

The primary stage filtration is a spun bonded pure polypropylene filter cartridge which removes rust, scale and particulates down to 5 microns. This level of filtration is way below the size of particle that is visible to the naked eye (40 microns is the size that you can see). The purpose of this filter is to protect the very much finer final filter to ensure that it does not become prematurely blinded by the fine particles that are present in our drinking water.

The secondary stage of filtration is a very finely divided activated carbon filter impregnated with an ion exchange medium that has a high affinity for the removal of lead and other heavy metals. The carbon powder used in this cartridge is so fine that it is capable of removing particles as fine as 0.5 microns. At this level of filtration, we can remove cysts and Cryptosporidium from the water supply.

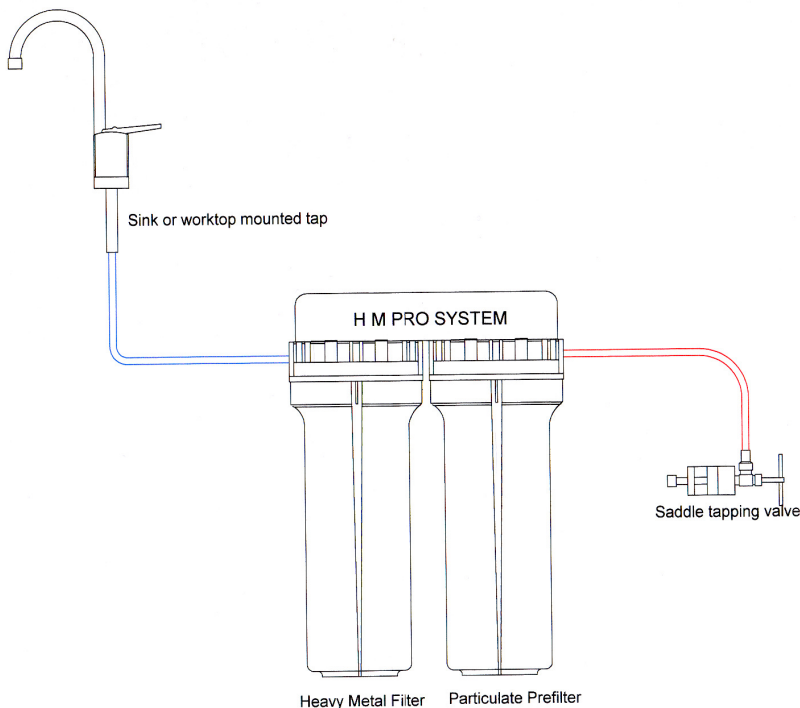

Removes

- Chlorine, taste and odour removal
- Heavy metal reduction
- Filtration to 0.5 microns
- Cryptosporidium, Giardia, Entamoeba, Toxoplasma

KIT PART NO:-
PRODOM 0030

CARTRIDGE SET:
PRODOM 0120

Recommended cartridge
changeout—6 monthly
